

# Firewall7

*Protect and monitor your network.*

A fully managed firewall to keep your information safe.

## Product overview

Firewall7 from SevenC sits between your network and the internet, and is designed to protect assets and ensure that no private information goes out of your network and no malicious content comes in. Firewall7 blocks unauthorised access while permitting sanctioned communications, and can be configured to permit or deny computer-based applications using a custom rules-set. Firewall7 provides a single default gateway to the internet for your local network and it supports ADSL, satellite, wireless and leased-line connections. All forms of internet communication, such as HTTP, SMTP, FTP, POP, and IMAP, are supported.

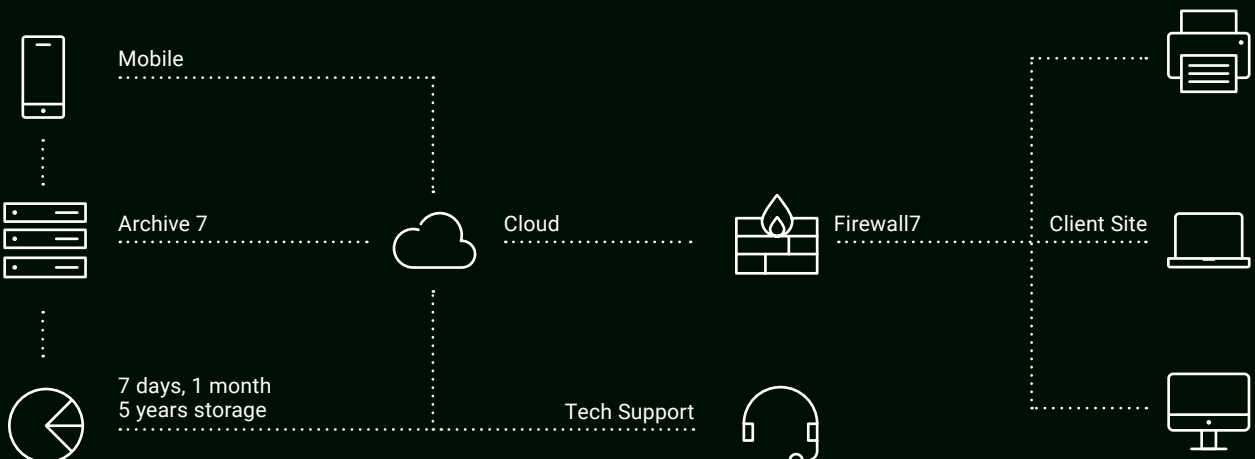

- Protect your network and workstations against viruses, spam and malware
- Real-time monitoring gives you critical insight into your network

- Stay connected with the failover functionality (supports multiple forms of connectivity)
- A single point of entry and exit to the internet means increased security and control, both external and internal
- No upfront set up costs or annual licence fees
- Unlimited, round-the-clock support

*It's time to take control of your network.*

## Structure

*Say goodbye to network  
and internet abuse.*

## Product features

- Supports multiple gateways facilitating failover, load balancing and traffic prioritisation
- NAT-ing firewall
- Web proxying
- Live graphical reports of all web traffic
- Implementation of per-user internet access policies
- Keep machines on your local network anonymous to potential intruders
- Apply access policy to network services or content, e.g. to block undesired sites
- Scan outbound content, e.g., for data leak protection
- Scan transmitted content for malware before delivery
- Automatically "recycles" the internet connection whenever the connection terminates
- Accommodates varying electronic security requirements using the IpTables Engine to filter underlying IP address

## Benefits

- Ensure safe visits to the internet and applications
- Enhanced security for your server and workstations
- Effective method to keep away hackers
- A feeling of increased security that your businesses electronic data is being protected
- Ensure that employees concentrate on their work or that children are unable to visit unsuitable sites
- Take control of your bandwidth usage
- IpActive - IpActive system is used to recycle internet connections

### With IpActive you are able to:

- Gain remote access to users' emails, files and folders
- Receive remote monitoring and support from SevenC

*Reporting features provide  
real business intelligence.*
