

IaaS

Best for business architecture, dedicated you your organisation.

Combines essential hardware and computing resources for your business into a unified virtualised unit that sits securely behind a private firewall.

Product overview

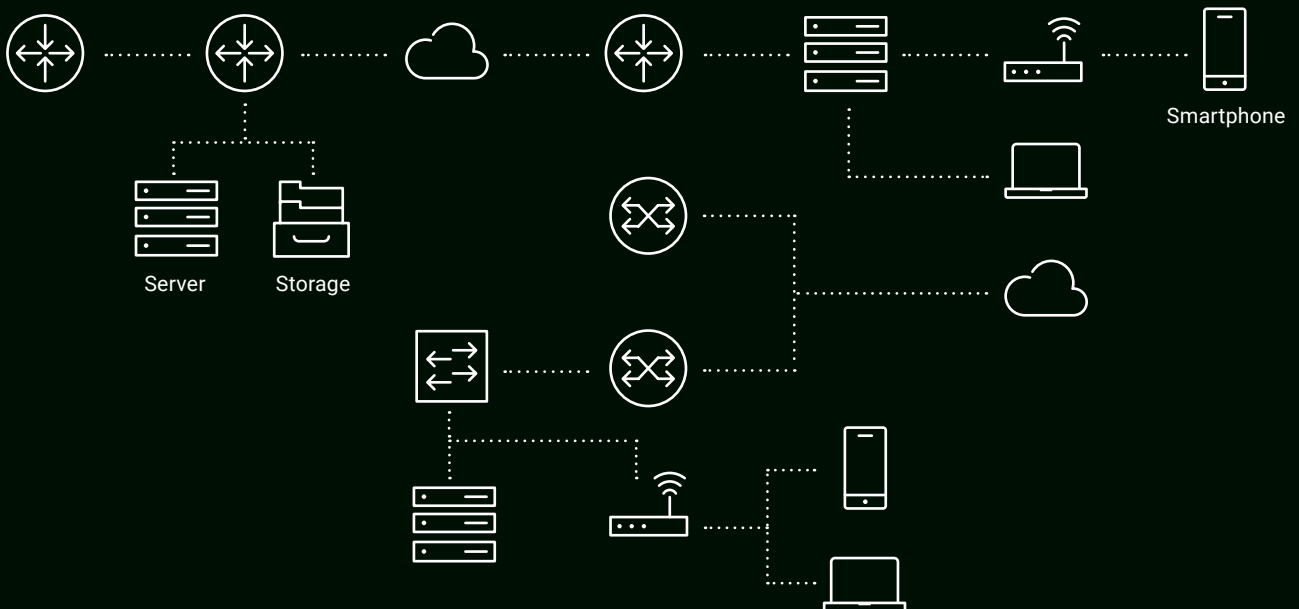

A cloud-computing platform containing all key business operating systems and applications within a corporate firewall and accessed over secure encrypted connections is a private cloud. Private clouds deliver all the benefits of cloud computing without the issues and concerns over control of enterprise and customer data. Private clouds designed and managed by SevenC deliver enterprise IT and allows your business to continually adapt to evolving business IT needs. Only you can operate in a private cloud as access is across secure encrypted connections.

SevenC architect, implement and manage private cloud services spanning:

- Server Operating Systems (Windows and Linux)
- Line of business ERP and accounting applications
- Line of business CRM applications
- File storage
- Web servers
- Database servers
- Email servers
- Backup and archive
- Business continuity

When your own cloud is performing, so is your business.

Structure
