

# Sync7

*Mirror your data off-site to avoid disaster.*

Keep your business up and running whatever happens.

## Product overview

Designed to function as a suite, Sync7 and DiskMirror7 offer comprehensive data protection and data recovery services. Your business's most valuable asset is its data, and unplanned events such as hard disk failures, viruses, operator mistakes, natural disasters or hardware theft can put your data and your business at risk.

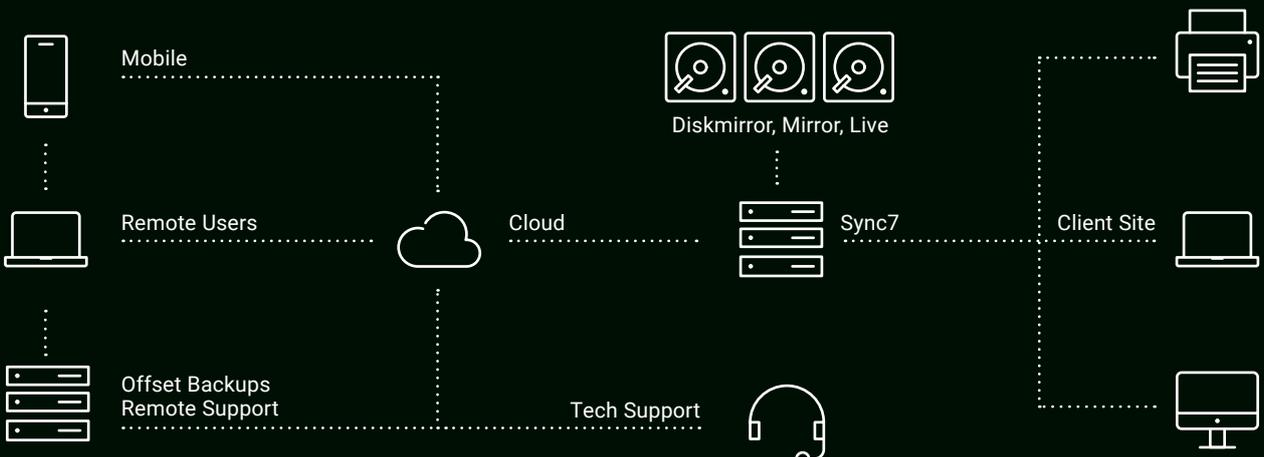

Regardless of the size of your business, a disaster recovery plan needs to be in place before disaster strikes. Sync7 and DiskMirror7 from SevenC ensure rapid recovery and secure off-site storage of your data. Should your servers suffer a complete failure or any other disaster, Sync7 and DiskMirror7 makes sure that your business is up and running in no time.

- Automatically mirror your business's vital data
- Recover your server fully after any disaster so that you're up and running in no time
- Stable, fully-managed, Linux servers that are immune to viruses
- All of your data is stored (not just bits and pieces)
- No upfront set up costs or annual licence fees
- Unlimited, round-the-clock support

*Quickly recover from any man made or natural disaster.*

## Structure

## Product features

- Complete remote storage of all electronic data
- Files can be recovered instantly
- Web access to backed up files for when travelling or at home
- Security is provided through secure-sockets connections to SevenC's data centres, 128-bit encryption and account passwords (data compression ensures regular backups are very efficient and non-intrusive)
- Differential synchronisation - if a change is made to a previously backed up document, only the change to that document is sent, not the whole document
- Backups can be scheduled or started manually and can, therefore, be performed at the most convenient times
- An automated, proactive monitoring system ensures any problems are identified and rectified quickly

## Differential off-site backup

A copy of the electronic state your servers is created in SevenC's secure, off-site archive repository. The electronic state includes the configuration data of the servers and users' data. The off-site backup is carried out after predetermined intervals.

## Benefits

- Full disaster recovery plan
- On-site and off-site data redundancy platforms proven immune to virus infection
- Efficient and reliable automatic processes
- No upfront investment
- Comprehensive protection and zero hassle
- Fixed monthly fee
- Recovery of your data is a phone call away

*Backup and running  
in no time.*

## DiskMirror7 - Data protection

DiskMirror7 is a "delayed RAID" system involving a "live" disk drive and at least one "mirror" drive.

The data on the mirror drive is synchronised with the live drive once a day. DiskMirror7 forms part of SevenC's disaster recovery suite, ensuring rapid recovery of your business's data and functions in the event of failure of the live drive.

If the live drive fails, it is replaced by the mirror drive immediately. A new replacement mirror drive is then deployed while the server remains operational.
